European Debut of SAFER Systems' New Combustion Analysis Model™ Scheduled For INTERSCHUTZ 2010

Leipzig, Germany – SAFER Systems, the global technology leader in chemical emergency management solutions, has scheduled the European debut of their latest product innovation and industry first – the Combustion Analysis Model™ (CAM) – at INTERSCHUTZ 2010. **SAFER Systems' President Ernie Gilbert will be flying to the event from the United States to personally be on hand for this important occasion.**

CAM is designed to address the special needs of firefighters, hazmat teams and others to:

- effectively analyze and better manage industrial or transportation-related fire events
- analyze any chemical fire, including a Tank Top, Pool, Stack or Jet, and Post-Dispersion fires
- obtain crucial information regarding the products of combustion – the soot and gases that a fire generates
- determine the downwind dispersion of combustion products, airborne particulate and hazardous materials not burned in the fire, along with the soot deposition, *and more.*

Providing a complete picture of the impact of the hazards associated with fires, toxic smoke and particulates allows first responders, government agencies and industrial personnel to make more informed decisions regarding the event's potential short- and long-term consequences to a facility/location, the environment and local communities.

“CAM is particularly relevant and useful to the fire protection, rescue, health and safety, civil security, and environmental sectors, which is why we chose to introduce it at the INTERSCHUTZ trade fair,” says Chris Cowles, Global Marketing Manager for SAFER Systems.

“For over 25 years, SAFER Systems has developed and implemented innovative, necessary solutions that inform and assist emergency responders, industry and government agencies,” says Gilbert. “CAM is a crucial new analysis and decision-making technology for addressing an assortment of dangerous situations that occur during a fire event, as well as significant post-event consequences.”

For information on meeting with SAFER Systems at the conference, please contact Danny Bracco at danny@mustangmktg.com.

ABOUT SAFER SYSTEMS

SAFER Systems is the global technology leader in chemical emergency management solutions. The company's state-of-the-art technologies are designed to provide vital, timely actionable decision making information relating to the dispersion and deposition of accidental or intentional releases of toxic chemicals. SAFER Systems' customers include global Fortune 500 chemical and oil companies, railroads, Hazmat/First Response teams, government agencies and more. SAFER Systems is headquartered in Camarillo, California and maintains offices worldwide. For more information, visit www.safersystemv10.com.
