**SAFER Systems Announces SAFER ChemPark,  
a Centralized, Real-Time Chemical Emergency Response Solution  
for Chemical Industrial Parks**

**Camarillo, Calif.–October 12, 2005–SAFER Systems, LLC**, the recognized global leader in integrated software for chemical emergency response solutions, introduces **SAFER ChemPark** for Chemical Industrial Park facilities. **SAFER ChemPark** enables Chemical Park facilities to share real-time data acquisition resources, such as weather stations and gas sensors, respond quickly to a toxic chemical release, and predict toxic vapor cloud impact. A patented, gas sensor based technology provides release rate estimation, greatly improving the accuracy of predictions.

**SAFER ChemPark** is a turnkey Chemical Park solution, which leverages SAFER Real-Time software to provide user-friendly viewing of release dynamics by Emergency Response Center personnel. The solution features integrated monitoring of the Chemical Park area, rather than individual plant sites. The Data Acquisition Server provides weather and sensor monitoring plus Internet-based data retrieval. Individual Quick Response systems are implemented in plant security centers.

SAFER Systems complements the ChemPark solution with a detailed engineering study, including MET station site location, gas monitor review, communications evaluation, and emergency response planning. The implementation includes scenario development, identification of Isopleth Concentration Limits and chemical properties, and reporting.

**SAFER ChemPark** provides a consistent, best practices-based approach to Emergency Response across the Chemical Park. **According to Don Smith, Vice President of Sales & Marketing at SAFER Systems, “this innovative product is ideal for a multi-plant investment and accommodates international needs, including availability in nine languages.”**

For further information, please call **SAFER Systems** at 805-383-9711 or 800-621-7237, or contact the Sales Department at [sales@safersystem.com](mailto:sales@safersystem.com).
